Abstract (en)

[origin: WO2020169515A1] This image-processing method comprises steps of: - defining (S104), in a three-dimensional digital image (40) of a target object, a plurality of observation directions (52, 54) passing through the three-dimensional digital image and emanating from a predefined observation point (50); - for each observation direction (52, 54), calculating (S106) a resulting value from the respective brightness values of the voxels of the digital image that are passed through by said observation direction; - constructing (S108) a two-dimensional digital image (80) whose pixel brightness values correspond to the calculated resulting values.
