Abstract (en)

[origin: WO2020170119A1] The invention is an automated system (100) for wiring connectors, comprising a feeding station (10), in turn comprising a multiple feed device (11) suited to accommodate a plurality of wires (F) and a feed head (12) suited to make the wires (F) advance selectively in order to expose their ends (Ft) to be crimped or, generically, processed. The system (100) comprises a guide system (20) for the sliding movement of said feed device (11) and of said feed head (12), so that said feed head (12) can be selectively positioned at the level of one or more processing stations (P1, P2, P3, C1) along said guides (20).
