Abstract (en)

[origin: WO2020169323A1] The method for controlling a hardware system using a blockchain is characterised in that a dynamisation of the blockchain is provided by moving the logic and parameters into the blocks on the blockchain itself and/or on a separate library chain, wherein the node software is declustered, the blocks are classified into types, and a container structure containing the logic and the parameters for the block processing method is added to the blocks. It is proposed to publish the abstract without a drawing.
