Abstract (en)

The toy animal of the present invention is formed of a rigid plastic container body, and a plush head and limbs attached to and extending from the plastic container body. The container body is made of two hollow rigid plastic parts, each having an edge. A zipper is situated between the edges of the plastic parts to connect the parts to form a container for small objects and the like. A zipper connects the plastic parts. The zipper parts are each fixed to the edge of a different one of the plastic parts such that the container can be opened and closed. Each of the zipper parts has an engaging portion mounted to a fabric base which is fastened to the edge of the plastic part by stitching.
