Abstract (en)
Packaging comprising a sleeve having an open end, a tray slideably received within the sleeve between a closed position, wherein an article located in the tray is enclosed within the sleeve, a front wall of the tray closing said open end of the sleeve, and an open position, wherein the tray extends from the open end of the sleeve to provide access to said article, a selectively releasable latch being provided acting between the tray and the sleeve, said latch preventing the withdrawal of the tray from its closed position within the sleeve when in a latched configuration, a tab or aperture being provided on an outer panel of the sleeve, said tab or aperture being adapted to permit manipulation of the latch to an unlatched configuration to allow the tray to be slid to its open position.
