Abstract (en)

The present invention relates to a detachable plug for accessing the inside of a steam generator (102) of a garment care device (100). The plug (104) is detachable from the steam generator (102) by rotation via a thread. The plug (104) comprises a mechanism having mechanical movements being dependent on the temperature of the steam generator (102), such that when the temperature of the steam generator (102) is equal to or above a given temperature threshold (T1), the mechanism is adapted to prevent the plug (104) from being detached from the steam generator (102).
