Abstract (en)

[origin: WO2020173792A1] According to the invention, in order to provide a vacuum apparatus, comprising a vacuumed-material container (22) having an interior (28), and a measuring device (164) for a liquid level (166) in the vacuumed-material container (22), the liquid level being detectable in a simple manner, the measuring device (164) has at least a first flexurally elastic element (170) and a second flexurally elastic element (172), the second flexurally elastic element (172) being spaced apart from the first flexurally elastic element (170), and the first flexurally elastic element (170) and the second flexurally elastic element (172) protrude into the interior (28) of the vacuumed-material container (22).
