Abstract (en)

[origin: WO2020174098A1] A screen, making a circular trajectory, to be used in chipboard and OSB factories, the screen being implemented by means of meshes having different mesh sizes and comprising a number of mesh levels (7) one above another, with which screen wood-based raw material is screened into different-sized fractions after chipping and drying, which screen comprises a frame part (1) and a moving part (2). The invention is implemented in such a way that the moving part (2) of the screen comprises at least two screen modules (4) and at least one frame module (5).
