Abstract (en)  
[origin: WO2020176059A1] The present invention relates to a novel nozzle structure that is designed for Minimum Quantity Lubrication (MQL) cooling processes implemented for cooling down the cutting tool and the workpiece properly in machining operations, that ensures the lubrication fluid is consumed at a minimum level by means of the high pulverization level it provides and further relates to a novel upper cover structure that is developed to be used in all Minimum Quantity Lubrication (MQL) systems.
