Abstract (en)  
[origin: WO2020174131A1] Disclosed is a method for controlling a motor vehicle drive train (GMP) during an assisted control deceleration, comprising determining (E21) a maximum value (123) of braking torque that can be delivered by the drive train, then, taking account of said maximum value (123), determining (E8) a command (301) to be delivered to the drive train (GMP) and applying said command (301) to the drive train, the braking torque maximum value (123) being determined according to the current value of ramping torque of the drive train (GMP).
