Abstract (en)

[origin: WO2020173579A1] The invention relates to a method for closing and securing a security vacuum packaging (1), in which method an object (13) to be secured and a plurality of particles (15) are arranged in an interior (100) of a container (10) of the security vacuum packaging (1). Subsequently, the security vacuum packaging (1) is evacuated via a vacuum closure (11), the plurality of particles (15) being fixed in a random immovable state. The security vacuum packaging (1) is closed and the random immovable state of the particles (15) is detected. The detected random immovable state of the particles (15) is stored for later comparison.
