Abstract (en)
[origin: WO2020178676A1] The invention relates to a temperature-control body assembly (1) for controlling the temperature of a space. The assembly (1) has: a temperature-control body (10), through which an energy-transporting medium can flow and which has a feed line and a discharge line for the energy-transporting medium; a fastening means for fastening the temperature-control body (10) to, for example, a wall or to an additional temperature-control body (20); a holding means (30) for holding and positioning a towel or an article of clothing on a first large surface (11) of the temperature-control body (10) in order to heat and/or dry said towel or article of clothing when the temperature-control body (10) is in heating operation; and an elongate element (32), which extends along the first large surface (11) and can be moved along the first large surface relative to the temperature-control body (10) between a retracted first position (P1) and an extended second position (P2).
