Abstract (en)

[origin: WO2020173837A1] The invention relates to a system (100) for exchanging data between control or evaluation apparatuses (10) and data-producing devices (11), such as tools (13), testing installations, calibrating installations or appliances for automatic identification. The system (100) comprises a control or evaluation apparatus (10) and at least one network-capable module (15) which can be connected or is connected to a data-producing device (11). The control or evaluation apparatus (10) and the network-capable module (15) are designed to exchange data via a wireless data link (18). In a first operating mode, a communication protocol provided for exchanging data between the control or evaluation apparatus (10) and the data-producing device (11) is tunneled via the wireless data link (18).
