Abstract (en)

[origin: WO2020173954A2] The invention relates to the field of workpiece machining and workpiece construction. The invention relates in particular to a method for defining a motion path (90, 190, 290) of an additive or subtractive tool or a laser beam used as a tool. For this purpose, the method defines a motion path (90, 190, 290) that comprises, in at least one subregion (80, 180, 280) on the machining plane (22), a hatching of straight path segments that are parallel to one another, which path segments are angled by a hatching direction (A, B, C) relative to a reference direction (33). The method according to the invention is used to define said hatching angles (A, B, C) using a Radon transform.
