Abstract (en)

[origin: WO2020174187A1] Disclosed is a stator for a rotating electrical machine, comprising a stator mass (25) that has slots (21), electrical conductors being housed in the slots, at least some of the electrical conductors, or even a majority of the electrical conductors, being pin-shaped, in particular U-shaped or I-shaped, and extending axially in the slots, at least one first electrical conductor housed in a first slot being electrically connected to a second electrical conductor housed in a second slot, at the outlet of said slots, each of the slots having an uninterrupted closed contour.
