Abstract (en)

[origin: WO2020174179A1] Stator for a rotating electrical machine, comprising a stator mass comprising notches (21), the electrical conductors (22) being housed in the notches (21), at least one portion of the electrical conductors (22), if not the majority, being in the form of a U-shaped pin, each comprising first (22e) and second (22f) legs respectively extending axially in the first and second notches (21), each electrical conductor (22) comprising several strands (23), the strands (23) of the first leg (22e) of an electrical conductor (22) being arranged in the first notch in a radially reverse order of the strands (23) of the second leg (22f) of the same electrical conductor (22) in the second notch.
