Abstract (en)
[origin: WO2022002576A1] The invention relates to an autonomous industrial truck (1) comprising a multi-load carrier (4) and an adjusting device (6). The multi-load carrier (4) comprises multiple receiving spaces (3), each of which is designed to receive a piece good (5), wherein the adjusting device (6) is designed to move each of the receiving spaces (3) into a left-hand side ejection position (ls), from which a piece good (5) can be ejected out of the receiving space on the left-hand side of the industrial truck (1), and into a right-hand side ejection position (rs), from which a piece good (5) can be ejected out of the receiving space on the right-hand side of the industrial truck (1).
