Abstract (en)  
The control system for a train locomotive lock interlock, especially a door lock, contains a locking bar (6) located above and along the base bar (1), a controlled actuator (4), which slides parallel to the base bar (1), or the lock longitudinal axis, coupled with the locking bar (6) via a tie rod (5), whereas the locking bar tongue (2) has an oblique bean-shaped hole (9), cooperating with the bolt lock pin (7), while the system also contains a stabilizer (10), interlock limit switch and door closing limit switch (3), while the locking bar (6) contains recesses (11) cooperating with the key insert (13, 14), which limit its length, while the actuator (4) and interlock limit switch (3) are coupled within the electronic system with a control processor, a card reader and keyboard, display, Ethernet network access and USB input, and indirectly, via the power output with the actuator (4).
