Abstract (en)

[origin: CN113925301A] The invention relates to a closing assembly, in particular for a piece of furniture of the cabinet type, comprising: at least one closing element, in particular a shutter, roller shutter door or the like, which is arranged so as to be movable from a closed position into an open position and move back. The closing element has a leaf element; at least one drive device operatively connected to the closing element via at least one traction element; and at least one sliding element and/or at least one deflection element. The closing assembly is characterized in that the drive device comprises a base body having at least one drive element and at least one winding element coupled thereto; the winding element is operatively connected to at least one first free end of the closing element via at least one first traction element and to at least one second free end of the closing element via at least one second traction element.
