Abstract (en)  
The present disclosure provides a swing assembly and an air conditioning device provided with the swing assembly. The swing assembly includes a plurality of swing blades, a link, and a mounting plate. The plurality of swing blades are parallel to an extending direction of an air outlet, spaced apart in a length direction of the mounting plate, and all connected to the link. The link is configured to drive the swing blades to rotate around an axial direction. When the air comes from the air conditioner, the swing blade can change left and right directions of the airflow, and the air blown out from the air conditioner can have maximized coverage of the entire house and become soft to some extent, avoiding the direct blowing that makes a person feel uncomfortable.
