Abstract (en)  
The invention relates to a Method for sending an electronic notification to a recipient, the notification relating to an assumed status of a person living in a household, wherein the method comprises generating and/or selecting the notification based on actual information referring to a plurality of different categories relating to at least a predetermined time interval, wherein, within the time interval an actual value of the information is compared with a nominal value of the information, the difference between the actual value of the information and the nominal value of the information is weighted to obtain weighted actual information, and the weighted information of the actual information of the plurality of different categories is put into relation to obtain the assumed status of the person or the household, wherein the categories are selected from the following group: information about consumption of at least power, water and/or gas in the household, a value of at least one sensor located in the household and/or carried by the person, information about health data of the person, information obtained by at least a smart device located in the household and information about interaction of the person with regard to an interactive device.
