Abstract (en)

[origin: EP3933954A1] The present disclosure relates to a cap assembly and a secondary battery. The cap assembly includes a cap plate, an electrode terminal, a fixing member and a connection member. The cap plate includes an electrode lead-out hole, the electrode terminal includes a terminal board, the terminal board is located at a side of the cap plate and covers the electrode lead-out hole, the fixing member at least partially surrounds the terminal board to fix the terminal board to the fixing member, the connection member is separated from the electrode terminal by the fixing member, and the connection member is connected with the cap plate. The connection member includes a main body, the main body is provided with a first groove opened downwardly along a top of the main body, and a part of the fixing member is located in the first groove. The terminal board of the embodiments of the present disclosure is firmly fixed to the cap plate through the connection member and the fixing member, which reduces the possibility of separation between the terminal board and the cap plate, thereby improving the safety of a structure of the secondary battery.
