Abstract (en)

[origin: WO2020178539A1] The present invention relates to a spreader tool for separating soft tissues in an outward direction during surgical operations, comprising a linkage system designed to be arranged in a main surface, and at least two valves (2) having an elongate front part (4) with an exterior side for pressing against the tissues, which is designed to be arranged substantially perpendicular to the main surface, and having a rear face (8) designed to be arranged in the main surface for attaching the linkage system, said linkage system comprising at least one elongate linkage element (20, 40, 50) comprising a plurality of connecting points designed for connecting the at least two valves (2) to one another or for connecting at least one valve (2) to at least one other elongate linkage means (20, 40, 50); said tool being notable in that each valve (2) comprises, on its rear face (8), two pegs (10) designed to fit into holes (22, 12) in the linkage elements (20, 40, 50).
