Abstract (en)

[origin: WO2020178439A1] A device is described with which a blank, provided for the production of at least one dental reconstruction (6), is fastened to a retaining device (2) of a machine tool provided for the machining of the blank (4). According to the invention, a body (10) is provided, having a first portion (10a), which is made of a material that can be machined by the machine tool, with at least one adhesive (12) by which the blank (4) is fixable to the first portion (10a), and having a second portion (10b), which is designed for fastening to the retaining device (2) of the machine tool.
