Abstract (en)

[origin: WO2020178077A1] The invention relates to a printing machine having an inkjet system, which preferably prints a water-based ink, and having a transport device, which transports a non-absorbent printing substrate in particular, wherein opposite outer edge regions of print nozzle arrays arranged in a print head of the inkjet system that have a lower print resolution compared to the center region are used during the printing process by movement of the relevant print head lateral to the feed direction of the printing substrate and by the corresponding positioning of said print head.
