Abstract (en)

[origin: WO2020182363A1] The invention relates to a labelling machine (1a, 1b) for applying labels (3) to containers using cold glue, comprising a glue supply device (2). The glue supply device is designed to produce the cold glue from a number of components, in particular at least one liquid and one solid component, such that the cold glue required to apply the labels can be produced by processing the components, in particular by mixing them together.
