Abstract (en)
[origin: WO2020180196A1] There is disclosed a device for compressing waste, said device including: - a waste bag suspension member formed with an upper portion around which an opening of a flexible waste bag may be spanned; - a lid movable between an open position, wherein waste may be added to a waste bag through the upper portion of the waste bag suspension member, and a closed position, wherein the lid covers the upper portion of the waste bag suspension member so that an at least partially closed volume may be formed between the lid and the waste bag; and - a suction member adapted to evacuate air from the at least partially closed volume, wherein the lid is perforated so that the suction device may evacuate the air through the perforation(s) in the lid. There is also disclosed a system for compressing waste as well as a method for operating the system.
