Abstract (en)
[origin: WO2020187599A1] The present invention relates to a crane with a height-adjustably mounted control or personnel stand, which can be raised and lowered by at least two lifting elements, wherein the two lifting elements are articulated on a compensating rocker, which is mounted, in such a way that it can rock about a horizontal pivot axis, on a rocker bearing head connected to the control or personnel stand, wherein a monitoring and/or safety device is provided for monitoring and/or ensuring the safety of the control stand. According to the invention, the pivot axis is formed as a measuring axis for detecting the loading state of the rockable mounting of the compensating rocker and providing a loading signal to the monitoring and/or safety device.
