Abstract (en)

[origin: WO2020182381A1] The invention relates to a winding machine (100), comprising motorisation means (20) arranged to move a support (10), carrying at least one watch (1) or clock movement, along a path (T) in a plane (P). The motorisation means (20) are arranged to be able to move each support (10) parallel to a starting position corresponding to the loading or unloading of a watch (1) or a movement on this support (10), the axes of a three-dimensional reference frame specific to the support (10) always remaining parallel to the oriented directions that they occupy in this starting position.
