Abstract (en)

Provided is an inhalation device cartridge. The inhalation device cartridge comprises a liquid storage portion configured to store liquid, an atomizing portion configured to atomize the liquid, a liquid transporting member configured to transport the liquid stored in the liquid storage portion toward the atomizing portion, and a gas introducing passage configured to introduce gas into the liquid storage portion. The liquid transporting member includes a first surface and a second surface intersecting with each other. The gas introducing passage includes a first portion extending along the first surface of the liquid transporting member and a second portion communicating with the first portion and extending along the second surface.
