Abstract (en)  
To provide an auscultation-assisting tool and a stethoscope with which the audibility of auscultatory sounds is improved. An auscultation-assisting tool 6 includes a hollow sheet 7 detachably attached to a diaphragm 30 included in a chest piece 3. The hollow sheet 7 includes a first film portion 7a detachably attached to the diaphragm 30 included in the chest piece 3, a second film portion 7b to be brought into contact with an examination site 2 and being deformable in conformity with an irregular surface of the examination site 2, and a hollow portion 7c provided hermetically between the first film portion 7a and the second film portion 7b. A transmission medium that transmits sound is sealed in the hollow portion 7c.
