Abstract (en)
An object of the present disclosure is to more efficiently perform a setting process for operation of a master device and a slave device in an interconnected manner than before. An alarm system (1) has a plurality of alarms including a first apparatus (10) and at least one second apparatus (20), and the plurality of alarms cooperate with each other to achieve alarming in an interconnected manner between the alarms. The first apparatus (10) includes a first controller (106). The first controller (106) is configured to execute a setting process between the at least one second apparatus (20) and the first apparatus (10). The second apparatus (20) includes a second controller (206). The second controller (206) is configured to execute a setting process between the first apparatus (10) and the at least one second apparatus (20). The first controller (106) is configured to transmit individual setting information to the at least one second apparatus (20) in the setting process, and the second controller (206) is configured to, when receiving the individual setting information, make, based on the individual setting information, a setting of the at least one second apparatus (20) including the second controller (206) in the setting process.
