Abstract (en)
[origin: WO2020233750A1] The invention relates to an operating device for a table, having a table panel with an adjustable height and/or inclination and having an internal collision detection device for detecting a collision between the table panel and an object or a person, comprising: a control unit and a hand-held switch that is connected to the control unit and has a display element, on which an element can be displayed for menu navigation, and one or more command buttons, by means of which the height and/or inclination of the table can be adjusted using the menu navigation, wherein at least one of the command buttons is assigned multiple times, and parameters of the table can be adjusted using the command buttons with multiple assignments, said parameters comprising a sensitivity level of the collision detection device.
