Abstract (en)

[origin: WO2020182891A1] The invention relates to a safety device (1) for a motor vehicle for automatically moving a device of the motor vehicle in a predefined driving situation, comprising an electric motor (2) for moving the device and a first power supply interface (4) that can be electrically coupled to an on-board power network (3) of the motor vehicle. The safety device (1) comprises a second power supply interface (5) for electrically coupling the electric motor (2) with a drive battery (6) of the motor vehicle. The second power supply interface (5) comprises a switching device (7) with switching means for an electrical coupling of the electric motor (2) with the drive battery (6) as a function of the predefined driving situation. The invention further relates to a safety system (10) comprising a plurality of safety devices (1) and to a method for operating such a safety system (10).
