Abstract (en)

[origin: WO2020187781A1] The invention relates to a container closure (11) having a pouring element (13), which merges into a container body or can be fastened on a container body, having at least one external thread (17), which is formed on the pouring element (13), and having a closure cap (15) for closing a pouring opening (19), which is provided within the pouring element (13). The closure cap (15) has a cylindrical threaded part (27) with an open periphery (29) and an internal thread, which interacts with the external thread (17) of the pouring element (13). The closure cap (15) also has a tamper-evident band (31), which is connected to the open periphery (29) of the threaded part (27) by means of a plurality of predetermined breaking lugs (33), wherein opening of the container closure for the first time is evident from the breaking of the predetermined breaking lugs (33). The tamper-evident band (31) has a first and a second end (35, 37), wherein the first end (35) is fixed to the open periphery (29) of the threaded part and the second end (37) can be connected to the pouring element (13).
