Abstract (en)
[origin: WO2020182303A1] The invention relates to a taphole plugging gun comprising a material chamber (21) for receiving a plugging mass volume, a mouthpiece for introducing into a taphole, and a nozzle part (23) which tapers in the direction of the mouthpiece and which is connected to the material chamber by means of a releasable connection device (25). In order to form the connection device (25), the material chamber (21) and the nozzle part (23) have axial connection protrusions (28, 30), which are designed to complement each other, on two opposing axial connection edges (26, 54) of a chamber wall (27) of the material chamber (21) and of a nozzle wall (29) of the nozzle part (23).
