Abstract (en)

[origin: WO2020185149A1] Herein is described an arrangement to control the movement speed of a percussive element (6) which is arranged to move in a housing (1) of a drilling machine, where the percussive element (6) comprises a brake surface (13), wherein the housing (1) comprises a damping chamber (11) configured to contain a fluid provided to dampen the movement speed of the percussive element (6) in the housing (1) and a conduit (15) configured to lead fluid from the damping chamber (11), wherein the arrangement is configured to control the movement speed of the percussive element (6) by adapting the pressure by which the fluid in the damping chamber (11) affects the brake surface (13) of the percussive element (6) by leading fluid from the damping chamber (11) only when a predetermined reference point (17) of the percussive element (6) is located ahead of a predetermined first position (19) along an axial elongation (E) of the damping chamber (11). Herein is also described a drilling machine comprising the arrangement and a method to control the movement speed of a percussive element (6) which is arranged to move in a housing (1) of a drilling machine.
