Abstract (en)
[origin: WO2020185084A1] The invention relates to system comprising a heating distributor and a flexible fluid connector configured to provide a fluid connection between the heating distributor on the one hand, and a pressure maintenance system and/or a degassing device on the other hand, the flexible fluid connector comprising a cap configured to be connected to a connection opening of the heating distributor, the cap comprising a first tubular wall defining a first through passage, a second tubular wall defining a second through passage, a first connector provided at an outer end of the first tubular wall, a second connector provided at the outer end of the second tubular wall, an inner connector provided at an inner end of the first or second tubular wall, wherein the flexible fluid connector further comprises a flexible elongate tube, wherein the flexible elongate tube is configured to extend over a distance into an inner space of the heating distributor.
