Abstract (en)

[origin: WO2020188414A1] According to a first embodiment, a method may comprise receiving, by a user equipment, a first modulation order and a first resource allocation information. The method may further comprise determining, by the user equipment, a second modulation order and a second resource allocation information. The method may further comprise determining, by the user equipment, a first portion of an intermediate number of information bits based on at least one of the first modulation order or the first resource allocation information, and a second portion of the intermediate number of information bits based on at least one of the second modulation order or the second resource allocation information. The method may further comprise determining, by the user equipment, at least one transport block size based on at least two portions of the intermediate number of information bits. The method may further comprise transmitting, by the user equipment, at least one resource block with the at one transport block size to at least a communication device.
