Abstract (en)

[origin: WO2020183096A1] The invention relates to a communication method implemented by a base station having at least one cell and forming part of a mobile access network comprising neighbouring cells of the cell. The method comprises broadcasting blocks referred to as SSB blocks at a first periodicity value for synchronising a terminal and for allowing said terminal to receive SIBs of which at least one of said SIBs comprises an identifier of at least one neighbouring cell, a second periodicity value of SSB blocks broadcast by said neighbouring cell and a frequency position of an SSB block of said neighbouring cell.
