Abstract (en)
[origin: EP3939487A1] The present invention relates to a modular doormat comprising at least one profile (1) having an elongated configuration, the profile (1) being shaped in the form of a channel (1') in accordance with a "U" -shaped transverse cross section; a covering element (2) located in the channel (1') and disposed for the contact thereof with the soles of footwear; first coupling means (A) disposed in correspondence with one elongated side of the profile (1); second coupling means (B) disposed in correspondence with another elongated side of the profile (1), the first coupling means (A) and the second coupling means (B) being mutually complementary; and adhesion means (3), said adhesion means (3) being disposed adhering to an external, lower surface of the profile (1). The at least one profile (1) may be disposed attached to a surface by means of the adhesion means (3).
