Abstract (en)

[origin: WO2020255175A1] The invention relates to a garment applicable to a four-legged animal, such as e.g. a dog, to protect it from the cold or shelter it from the rain. Said garment comprises an at least partially hollow collar for accommodating therein a highly flexible cape. The cape is connected to the collar, inside said cavity, at an edge thereof. The cape is flexible to such an extent that it can be completely accommodated in the collar and be partially extractable from the latter when it is folded onto itself.
