Abstract (en)
[origin: WO2020176912A1] The invention relates to a solar protection or wind protection device (1) having a plurality of longitudinal rods (2a), which have longitudinal sub-rods (2) coupled on the long side, having a plurality of transverse rods (6), having transverse sub-rods (66, 66a, 66b) coupled on the long side, with at least one covering unit which is stretched between the longitudinal rods (2a), wherein the transverse rods (6) at least partially connect the longitudinal rods (2a) to one another, and wherein at least one transverse rod (6) has at least one tension adjusting device (11) for adjusting the tension in the covering unit in the transverse direction (q). The problem addressed by the invention it thus to provide a solar protection or wind protection device which is easier to use. This problem is solved according to the invention by the tension adjusting device (11) being arranged between two transverse sub-rods (66, 66a, 66b) of the transverse rod (66, 66a, 66b).
