Abstract (en)

[origin: WO2020187401A1] The invention relates to a pallet (1) as a load carrier, comprising a top face, which is called the pallet top (4), and a bottom face, which is designed in the form of separate runners (9), the pallet (1) consisting of plastics material, and the runners (9) having an elongate, substantially rectangular standing surface but having voids (14) in the form of roundings or chamfers at the four corners of said standing surface, stops (6) being arranged at the edge of the pallet top (4), which stops project upward beyond the pallet top (4). According to the invention, the stops (6) are arranged in so-called void regions (15) of the pallet top (4), namely where the voids (14) of a runner (9) of a second, identical pallet (1) standing congruently on the pallet top (4) are located.
