Abstract (en)

[origin: WO2020193918A1] The invention relates to a capsule adapted to seal the opening in a container, such as the neck of a bottle, wherein said container is adapted to contain a first fluid, the capsule being adapted to contain a second fluid that is different from the first fluid, the capsule comprising a striker which is movable from a first initial position to a second opening position and which allows, in said second position, the second fluid from being released into the container such that the first fluid and the second fluid are mixed, said striker being in the form of a cylinder adapted to allow a fluid discharge device, such as a pipette, to penetrate the capsule and enter the container.
