Abstract (en)

[origin: WO2020192986A1] The invention relates to a method for enhancing flat textile materials via finishing with fluid substances or substance mixtures, wherein the substances or substance mixtures can contain particles of similar or different sizes, by means of controlled, targeted application using printing technologies in the form of individual printing heads or one or more printing beams with a plurality of printing heads, wherein either a recipe-based mixture of a compound is created and then applied, or individual substances are applied wet-on-wet with multiple printing heads to form a mixed finishing layer.
