Abstract (en)

[origin: WO2020201559A1] The present invention is directed to a system assembly for automated and digital construction status monitoring and to a correspondingly designed method. By means of the proposed system assembly and the proposed method, it is possible to fully automatically examine a construction process and to ensure that trades work has been performed according to specifications. The present invention therefore allows appropriate monitoring with only minimal technical aids. The present invention is also directed to a computer program product having control commands, which operate the system assembly and implement the method.
