Abstract (en)

[origin: CN113967889A] A disassembling tool disclosed by the invention comprises an integrally-formed end piece, the end piece is symmetrical to the longitudinal center line face and is provided with a flat lower surface (20) and an upper surface, two cushion blocks (21) extend out of the lower surface, and the upper surface is provided with two small planes (22) which are inclined relative to the lower surface (20) and extend towards the ends of the cushion blocks (21), so that a scraping tip is formed.
