Abstract (en)

[origin: EP3943362A1] The present invention relates to on-board equipment and a method capable of efficient shunting. The on-board equipment has a shunting mode and a passive shunting mode, when the on-board equipment is in the passive shunting mode, a driver activates a bridge, the on-board equipment directly enters the shunting mode, and shunting operation may be conducted immediately, so that a process of electrifying the on-board equipment and entering the shunting mode are saved, thereby greatly improving working efficiency. With only one set of on-board equipment equipped, a train may also realize the efficient shunting operation, save cost, and also save mounting space.
