Abstract (en)
[origin: EP3943669A1] The present disclosure is related to an excavator capable of performing precise works and a method of controlling the excavator, the excavator including: an excavator equipped with a bucket including at least two bucket ends; a sensor capable of measuring an angle of a working portion of the excavator; a pop-up window for selecting one of the at least two bucket ends; and a controller configured to detect a distance between a working surface and the selected bucket end based on a size of the bucket and an angle between the working surface and an imaginary straight line connecting the bucket ends.
